- rapid sustained release ionic silver with sustained effect up to 7 days

Silicone contact layer

- friendly to sensitive and fragile skin
- prevent adhesion to the skin and avoid secondary damage
- reduce the pain of dressing changes

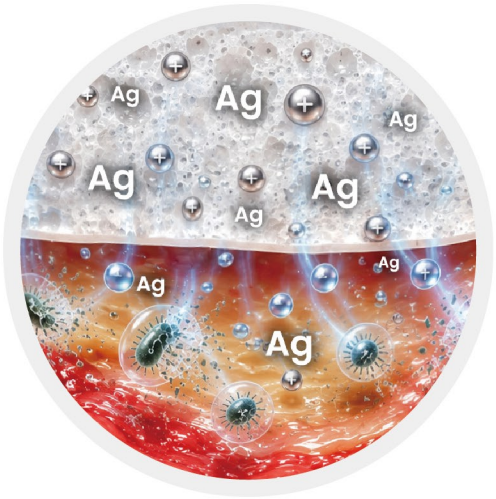

Ag SILICONE FOAM DRESSING

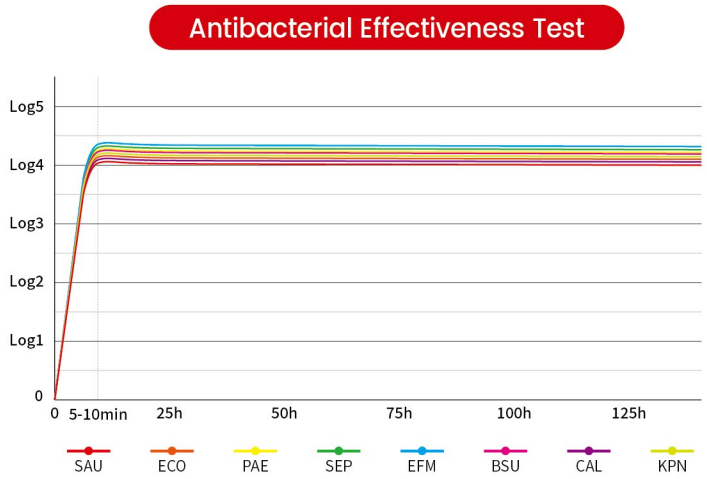

◇ Non-Border

SLK MEDICAL

DESCRIPTION

Alexer® Ag silicone foam dressing non-border is indicated for the management of exuding wounds such as leg and foot ulcers, pressure injuries, traumatic and surgical wounds, superficial and partial thickness burns.

BENEFITS

- Waterproof and bacterial barrier-can shower with the dressing on the skin.
- High absorbency - Prevents excess fluid causing maceration to healthy skin and can reduce the number of dressing changes.
- Perforated wound contact layer with a gentle silicone adhesive perforated film – protects the wound bed from adhering to the dressing.
- Supports non traumatic removal – assists with minimising trauma at dressing change.
- Effective antimicrobial- kills and inhibits the growth of bacteria and prevents colonisation and proliferation of bacteria.
- Manages wound exudate and microbial contamination - which reduces wound pain during wound healing.
