Alexer®

ALGINATE WOUND DRESSING

SLK MEDICAL

DESCRIPTION

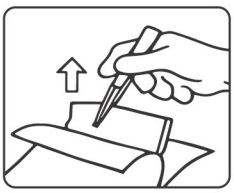

Alexer® alginate wound dressing is made from natural seaweed-derived fibers, designed for the management of moderate to heavily exuding wounds.

FUNCTIONS:

- **High Absorbency** – Alginate fibers form a gel upon contact with wound exudate, locking in moisture while maintaining a moist wound environment (ideal for healing).
- **Hemostatic Properties** – Calcium alginate can help control minor bleeding by promoting platelet activation.
- **Biodegradable** – The fibers break down naturally in the wound, eliminating the need for painful removal.
- **Non-Adherent** – The gel formation prevents sticking to the wound bed, reducing trauma during dressing changes.
- **Promotes Autolytic Debridement** – Helps soften and remove necrotic tissue by maintaining a moist environment.

HOW TO USE IT

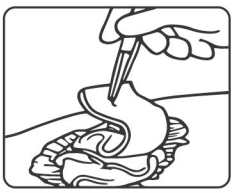

STEP 01

Select a size that is slightly larger than the wound,open the package by pulling.

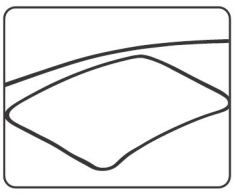

STEP 02

Apply a dry product to the moist wound bed. Shallow wounds: choose the correct size of flat dressing to be able to cover the entire wound.

STEP 03

Deep wounds and cavities: cut the appropriate length of the cavity dressing and pack the wound loosely.

STEP 04

Cover and secure with an appropriate secondary dressing such as alexer silicone foam border.

INDICATIONS

Alexer® alginate wound dressing is indicated for the management of the following moderately to heavily exuding acute and chronic wounds:

- Pressure ulcers
- Venous leg ulcers
- Arterial leg ulcers
- Diabetic ulcers
- Graft and donor sites
- Post-operative surgical wounds
- Cavity wounds
- Superficial and partial thickness burns
