Alexer®

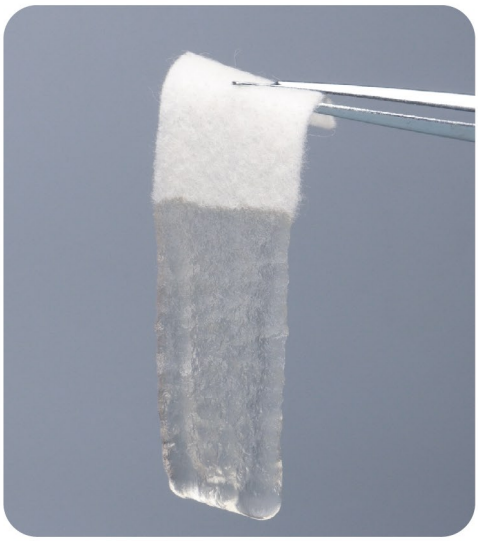

GELLING FIBER
DRESSING

SLK MEDICAL

FUNCTIONS

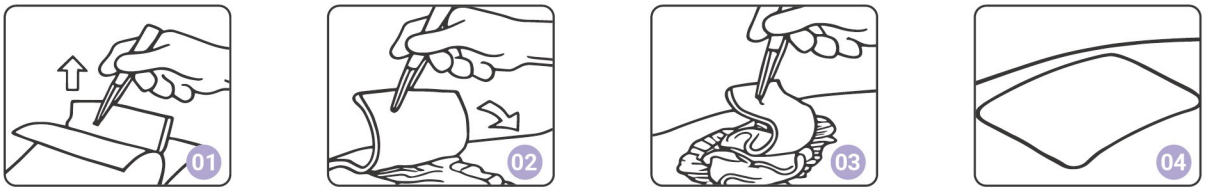

Alexer® gelling fiber dressings are advanced wound care products designed to manage moderate to heavy exudate while maintaining a moist wound environment. They are composed of hydroactive fibers (often carboxymethylcellulose or other absorbent polymers) that swell into a gel upon contact with wound fluid.

FUNCTIONS:

- **Superior Absorption** - Fibers rapidly absorb exudate and transform into a soft gel, preventingmaceration of surrounding skin.
- **Moisture Retention** - Maintains an optimal moist wound environment to promote healing
- **Non-Traumatic Removal** - The gel minimizes adherence to the wound bed, reducing painduring dressing changes.
- **Autolytic Debridement** - Helps soften and remove slough or necrotic tissue.
- **Conforms to Wound Shape** - Flexible fibers adapt to irregular or deep wounds (e.g. cavities,tunnels).

HOW TO USE IT

INDICATIONS

Alexer® gelling fiber dressing is indicated for the management of the following moderately to heavily exuding acute and chronic wounds:

- Pressure ulcers
- Venous leg ulcers
- Arterial leg ulcers
- Diabetic ulcers
- Graft and donor sites
- Post-operative surgical wounds
- Cavity wounds
- Superficial and partial thickness burns
