Alexer®

HYDROCOLLOID
DRESSING

POROSITY | ABSORPTION OF OOZE | EASY-TEAR

SLK MEDICAL

DESCRIPTION

Alexer® hydrocolloid dressing is designed to absorb wound exudate using water-soluble polymer particles, suitable for covering and managing non-chronic wounds.

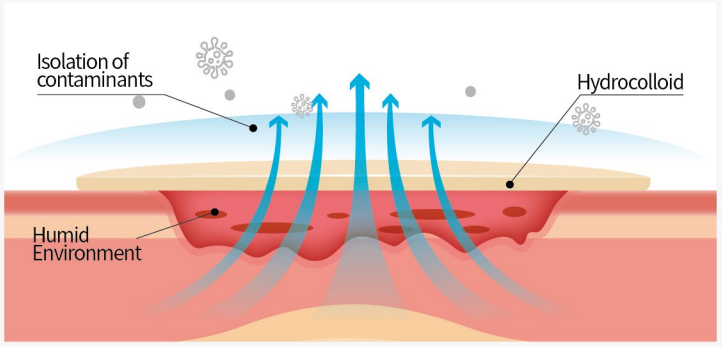

PRODUCT FEATURES

- **Debridement function**
  It has autolytic debridement effect, which is conducive to fibrinolysis and macrophage clearance of necrotic tissue.
- **Transparent design**
  The nurse can inspect the wound without changing or lifting the dressing, allowing for close observation of the healing process.
- **Wound protection**
  Protect exposed nerve endings, relieve pain, and avoid re-mechanical damage.
- **Good flexibility**
  Thin, flexible hydrocolloid dressing that can be applied to any part of the body.
- **Moist environment**
  24h continuous absorption of wound seepage to form a gel; creating a low-oxygen, slightly acidic environment to promote wound healing.

Protecting The Wound

Alexer® hydrophilic particles in hydrocolloid dressings can form a gel-like semi-solid substance after absorbing exudate, which adheres to the base of the wound and provides and maintains a wet environment conducive to wound healing.

Type	Size	Package	Ref.No.
extra thin	5x5cm	10pcs/bx,40bxes/ctn	S11011001
	10x10cm	10pcs/bx,40bxes/ctn	S11011002
	7.5x7.5cm	10pcs/bx,40bxes/ctn	S11011003
	15x15cm	10pcs/bx,40bxes/ctn	S11011004
	20x20cm	10pcs/bx,40bxes/ctn	S11011005
